

### Amendments to the Claims

This listing of claims will replace all prior versions and listings of claims in the above-identified application:

#### Listing of Claims

##### **Claims 1-15 (Canceled).**

**Claim 16 (Currently amended):** A client terminal in which a software including a plurality of functions is installed and which is capable of communicating with a server apparatus, the terminal comprising:

a setting unit, which sets ~~respective flags of said~~ for each the plurality of functions ~~into an enabling state and a disabling state so that an enabled-state flag indicating that the function is usable or a disabled-state flag indicating that the function is unusable, wherein the function with the enabled-state flag of which is set into the enabling state is to be subjected to~~ charging;

~~a controlling unit, which controls usability of the function in accordance with the state of the flag thereof set by said setting unit, so as to make the function the flag of which is set in the enabling state, usable and make the function the flag of which is set in the disabling state, unusable;~~

a payment unit, which executes, every first predetermined period, payment processing of a predetermined price of the function with the enabled-state flag of which is set in the enabling state ~~set~~ by said setting unit;

a time count unit, which counts a period in which said the function with the enabled-state flag of which is set in the enabling state, remains unused ~~being not used~~;

a prohibition request unit, which automatically requests the server apparatus to prohibit ~~the usability~~ use of the function ~~subjected to period-counting by said counting-unit~~ which remains unused if ~~said-counted~~ the period counted by said time count unit exceeds a second predetermined period; and

a changing unit, which changes ~~the state of the~~ enabled-state flag of the function ~~which remains unused~~ said-counted-period of which exceeds the second predetermined period, ~~from the enabling-state to the disabling-state~~ to the disabled-state flag in response to a response of said from the server apparatus to the ~~prohibition~~ request by said prohibition request unit;

an icon display unit, which displays icons respectively corresponding to the plurality of functions such that each icon distinguishably shows whether the corresponding function is usable or unusable, in accordance with the enabled-state flag or the disabled-state flag set by said setting unit; and

a permission request unit, which, in response to a user instruction, requests the server apparatus to permit use of the function with the flag changed from the enabled-state flag to the disabled-state flag by said changing unit,

wherein, if said changing unit changes the enabled-state flag of the function which remains unused to the disabled-state flag, said icon display unit changes a display status of the icon for that function, and

wherein said changing unit changes the disabled-state flag of the function which remains unused to the enabled-state flag in response to a response from the server apparatus to the request by said permission request unit, and said payment unit executes the payment processing of the predetermined price of that function.

**Claim 17** (Previously Presented): A terminal according to claim 16, wherein the function is at least one of a scan function, print function, a copy function and a facsimile transmission function.

**Claim 18** (Cancelled).

**Claims 19-21** (Cancelled).

**Claim 22** (Currently amended): A control method of client terminal in which a software including a plurality of functions is installed and which is capable of communicating with a server apparatus, said method comprising the step of:

~~setting respective flags of said~~ for each the plurality of functions ~~into an enabling state and a disabling state so that~~ an enabled-state flag indicating that the function is usable or a disabled-state flag indicating that the function is unusable, wherein the function with the enabled-state flag ~~of which is set into the enabling state~~ is to be subjected to charging;

~~controlling usability of the function in accordance with the state of the flag thereof set in said setting step, so as to make the function the flag of which is set in the enabling state, usable and make the function the flag of which is set in the disabling state, unusable;~~

executing, every first predetermined period, payment processing of a predetermined price of the function with the enabled-state flag of which is set in the enabling state set in said setting step;

counting a period in which said the function with the enabled-state flag of which is set in the enabling state, remains unused being not used;

automatically requesting the server apparatus to prohibit ~~the usability use~~ of the function ~~subjected to period counting in said counting step~~ which remains unused if said counted the period counted in said counting step exceeds a second predetermined period; and

changing ~~the state of the enabled-state flag with the function which remains unused~~ said counted period of which exceeds the ~~second predetermined period, from the enabling state to the disabling state to the disabled-state flag~~ in response to a response of said ~~from the~~ server apparatus to the ~~prohibition request~~ in said prohibition request step;

displaying icons respectively corresponding to the plurality of functions such that each icon distinguishably shows whether the corresponding function is usable or unusable, in accordance with the enabled-state flag or the disabled-state flag set in said setting step; and

requesting, in response to a user instruction, the server apparatus to permit use of the function with the flag changed from the enabled-state flag to the disabled-state flag in said changing step.

wherein, if said changing step changes the enabled-state flag of the function which remains unused to the disabled-state flag, said displaying step changes a display status of the icon for that function, and

wherein said changing step changes the disabled-state flag of the function which remains unused to the enabled-state flag in response to a response from the server apparatus to

the request in said requesting step, and said executing step executes the payment processing of the predetermined price of that function.

**Claim 23 (Cancelled).**

**Claim 24 (Currently amended):** A record medium storing a program readably by a computer for implementing a control method of client terminal in which a software including a plurality of functions is installed and which is capable of communicating with a server apparatus, said method comprising the step of:

~~setting respective flags of said for each the~~ plurality of functions ~~into an enabling state and a disabling state so that an enabled-state flag indicating that the function is usable or a disabled-state flag indicating that the function is unusable, wherein the function with the enabled-state flag of which is set into the enabling state is to be subjected to charging;~~

~~controlling usability of the function in accordance with the state of the flag thereof set in said setting step, so as to make the function the flag of which is set in the enabling state, usable and make the function the flag of which is set in the disabling state, unusable;~~

executing, every first predetermined period, payment processing of a predetermined price of the function with the enabled-state flag of which is set in the enabling state set in said setting step;

counting a period in which ~~said the function with the enabled-state flag of which is set in the enabling state, remains unused being not used;~~

automatically requesting the server apparatus to prohibit the ~~usability use~~ of the function ~~subjected to period counting in said counting step~~ which remains unused if said ~~counted the~~ period counted in said counting step exceeds a second predetermined period; and changing the state of the enabled-state flag with the function which remains unused said ~~counted period of which exceeds the second predetermined period, from the enabling state to the disabling state~~ to the disabled-state flag in response to a response of said ~~from the~~ server apparatus to the ~~prohibition~~ request in said prohibition request step;

displaying icons respectively corresponding to the plurality of functions such that each icon distinguishably shows whether the corresponding function is usable or unusable, in accordance with the enabled-state flag or the disabled-state flag set in said setting step; and

requesting, in response to a user instruction, the server apparatus to permit use of the function with the flag changed from the enabled-state flag to the disabled-state flag in said changing step,

wherein, if said changing step changes the enabled-state flag of the function which remains unused to the disabled-state flag, said displaying step changes a display status of the icon for that function, and

wherein said changing step changes the disabled-state flag of the function which remains unused to the enabled-state flag in response to a response from the server apparatus to the request in said requesting step, and said executing step executes the payment processing of the predetermined price of that function.

**Claim 25 (Cancelled).**

**Claim 26** (Previously Presented): A terminal according to claim 16, wherein the second predetermined period is determined in correspondence with the first predetermined period.

**Claim 27** (Currently Amended): A terminal ~~method~~ according to claim 16, wherein the predetermined price is determined for each function and must be paid for usage of the function.

**Claim 28** (Previously Presented): A control method according to claim 22, wherein the second predetermined period is determined in correspondence with the first predetermined period.

**Claim 29** (Previously Presented): A control method according to claim 22, wherein the predetermined price is determined for each function and must be paid for usage of the function.

**Claim 30** (Previously Presented): A record medium according to claim 24, wherein the second predetermined period is determined in correspondence with the first predetermined period.

**Claim 31** (Previously Presented): A record medium according to claim 24, wherein the predetermined price is determined for each function and must be paid for usage of the function.
